PART I

INTRODUCTION

INTRODUCTION

The data listed herein are a summary of the 1984 results acquired from the APIOS daily ambient air sampling network. Collection of daily ambient air samples began in the Southwestern Region (Longwoods) on March 3, 1981; in the Central Region (Dorset) on July 25, 1980; in the Southeastern Region (Charleston Lake) on March 23, 1981; and in the Northwestern Region (Fernberg) on October 2, 1981. All data presented in this report have been screened for validity. Remarks and qualifications have been appended to records, and/or results where necessary. The screening procedure involves the application of gross limit checks by comparing each analytical result with a calculated upper limit. Gross limit checks were applied to the results. Upper limits were determined as M + 2S where median (M) and scale (S) represent robust estimates of mean and standard deviation respectively. Scale of the distribution was estimated from interquartile distance, i.e. S=0.74 (3rd quartile - 1st quartile) based upon logarithmically transformed results. In a situation where the distribution is significantly bounded by reported detection limits, S may be estimated as follows, S=1.48 (3rd quartile - 2nd quartile). All lower gross limits were specified as zero. Upper limits were calculated for each region. Also, the structure of each sample was examined by conducting a principal components analysis and plotting each sample's scores (PC I vs PC II)[1]. Samples that were determined to be obvious outliers were flagged as unreliable.

The sampler utilized for daily air sampling is the Metrex Sequential Air Sampler type SAS 8-25. The sampler is loaded once weekly with 7 active filter packs and 1 passive filter pack. Each active filter pack is exposed for 24 hours beginning at 0800 h local time and terminating at 0800 h local time the next day, except at Fernberg, 0700 h local time is utilized, because the zone time is one hour later at Fernberg than at the other three stations. The passive filter pack is for blank correction. Sampling details are described in another document[2].

Station Identification

The station identification is defined by four descriptive fields (e.g. - Dorset/Daily/Sequential #2). The first field refers to the sampling location. The second and third fields describe the sampling interval and the instrumentation used respectively. The last numeric field refers to the index code utilized on the location map.

Daily Ambient Air Concentration Listings

All analytical results presented in this report were corrected for passive loadings unless otherwise specified. If a passive result is reported as less than the analytical detection limit, then a value corresponding to one half the detection limit is utilized for passive correction. If the passive result is equal to or exceeds the active result, then a zero is reported. Each filter pack is loaded with a teflon filter, a nylon filter and a pair of Whatman 41 filters with the first two filter types being upstream and the last filter type being downstream. The teflon filter is analysed for particulate SO_4=, NO_3- and NH_4+. The nylon filter is analysed for gaseous HNO_3 and SO_2 retention, and the Whatman 41 filter (impregnated with K_2CO_3 - glycerol) is analysed for gaseous SO_2. The reported parameter "TOTL NO3" represents total nitrates and is calculated by the summation of N-HNO_3 and N-NO_3. If a detection limit is encountered in the calculation of "TOTL NO3", then a value corresponding to one half the detection limit is utilized. The parameter "SULPHUR DIOXIDE" represents the summation of gaseous SO_2 on Whatman 41 and on nylon filters. In the presented data listings the parameter "NITRIC" represents nitric acid. Remark codes (e.g. U, A, and G) appended to individual results are defined in a later section.

Field Comment Code Index

A - Sampler malfunction
B - Hydro failure (known/suspected)
C - Flow volumn suspected
D - Contamination (known/suspected)
E - Filter placement incorrect
F - Sample not submitted
Q - Other

Office Comment Code Index

F - Abnormal flow volume - flow volume rate less than 14,400 litres per day or greater than 43,200 litres per day

Z - Abnormal sampling period

X - Sample lost

Result Remark Code Index

>	- actual result greater than value reported
<	- actual result less than value reported
<T	- actual result less than criterion of detection
<W	- no response, minimum possible result reported
A	- approximate value
U	- unreliable result
P	- not corrected for passive
<P	- not corrected for passive - reported value is a detection limit
G	- outlier of gross Limite Checks
